

Process Runner DB

Manage Your Data Between SAP and Database Systems

SAP users face a myriad of pressures, such as growing complexity and resource constraints, while being asked to deliver high-quality data, faster time to value, and better cost management. The need for accurate transfer of data between your data sources and SAP systems is more critical than ever. However, relying on manual operations is inherently error prone, hindering your ability to get the most out of your data. Today's environment requires enterprise-class automation to overcome these challenges of data management.

Process Runner DB dramatically reduces ongoing costs and optimizes efficiencies by automating day-to-day data maintenance and migration operations between your SAP system and other database systems.

- > Upload and download data, information, and events
- > Supports mass data creation, changes, updates, verification, etc.
- > Eliminate programming and scripting with an easy point-and-click interface
- > Works out of the box for fast time to value

Process Runner DB drives bottom-line results throughout the data management process across your SAP systems and databases by recording, mapping, and executing across transactions, BAPIs, and RFMs. Process Runner DB dramatically reduces ongoing costs and optimizes efficiencies by automating day-today data maintenance and migration operations between your SAP and database systems.

Efficiency

A consistent and highly repeatable solution driving out manual, error-prone processes, facilitating widespread efficiency and self-sufficiency.

Coverage

Broad coverage to drive efficient data migration across SAP transactions, BAPI/ RFM, or data extraction for master, transaction, or configuration data providing value to all users.

Ease-of-Use

A robust, intuitive product that enables users to migrate data quickly and accurately without scripting or programming.

Broad Database Support

Process Runner DB is compatible with and supports databases that use an ODBC or OLEDB compliant driver, including Microsoft SQL, Oracle SQL, SAP, and SAP HANA.

 Click and run – no programming required 	> On-demand scheduling	> BAPI multi-table support
 Smart and broad mapping types 	> Automatic table splitter	> Embedded XML tables
